

RELEASE NOTES

GreenRADIUS UPDATE v4.5.7.7

RELEASE DATE
JANUARY 30, 2023

GreenRocket
Security

NOTES

- a. This GreenRADIUS update can only be applied to v4.4.6.6 or later.
- b. A minimum of 4GB RAM is recommended for this update to be applied successfully.
- c. Before applying updates, we recommend creating a snapshot of the GreenRADIUS VM in your virtualization server environment that can act as a backup.
- d. The update process may take about 10 to 15 minutes, and processing of authentication requests may be affected for some time during this process.

VULNERABILITIES PATCHED

1. USN-5813-1 - Linux kernel vulnerabilities
2. USN-5810-2 - Git regression (AWS)
3. USN-5811-1 - Sudo vulnerabilities
4. USN-5810-1 - Git vulnerabilities (AWS)
5. USN-5801-1 - Vim vulnerabilities
6. USN-5800-1 - Heimdal vulnerabilities
7. USN-5795-1 - Net-SNMP vulnerabilities
8. USN-5788-1 - curl vulnerabilities
9. USN-5787-1 - Libksba vulnerability

STEPS TO APPLY THE UPDATE

1. Download the [GreenRADIUS update v4.5.7.7 zip file](#)
(md5 = 61f0c62a906f65e726e09f9706121370, sha256 = bff4ee1cb2788b4641fb4e565e836f0b534857da7a58f13765be509e8f158830)
Extract it, and it will result in a folder "GreenRADIUS_4577_Update"
2. Copy this folder onto the GreenRADIUS host in /home/gradmin using a client like scp or WinSCP
3. Log in to GreenRADIUS over ssh
4. Run the following commands:
 - a) \$ cd /home/gradmin/GreenRADIUS_4577_Update
 - b) \$ sudo chmod +x install_update.sh
 - c) \$ sudo sh install_update.sh
5. The system and application components will be updated. After a successful update, a prompt will be shown to reboot the system. Type "y" to reboot the system to complete the process.
6. After a successful update, it is recommended to clean up the new directory created for this update process.
 - a) \$ sudo rm -rf /home/gradmin/GreenRADIUS_4577_Update

ENHANCEMENTS, NEW FEATURES, AND BUG FIXES OVER GreenRADIUS v4.5.6.6

1. Fixed an issue with the reports where a Perl error was seen while generating a report if a timezone not listed in the IANA timezone database (AKA Olson database, zoneinfo database, or tzdata) was configured on the server host
2. Added support for editing the configuration of a synchronization server
3. Fixed errors encountered by users during FIDO2 token registration/authentication in a web application using the GreenRADIUS FIDO2 Authentication API
4. List of scheduled reports and generated scheduled reports is sorted based on creation time
